

JOINT-USE PROGRAM MANAGEMENT

OUR SOLUTIONS

EN Consulting offers a comprehensive portfolio of electric utility engineering services, including Joint-Use program development and management. With over 10 years of experience managing Joint-Use programs, our team of electric utility engineering experts has the knowledge and skillset to develop seamless processes utilizing the latest and most effective tools to fit the growing needs of modern utilities.

Our services include development of permit application requirements, application documentation and submission procedures, make ready design requirements based on the National Electric Safety Code (NESC), and pole loading analysis and permit design review. We apply our comprehensive knowledge and expertise to ensure compliance with all current regulations, including the FCC's One-Touch Make Ready (OTMR) ruling. Working in partnership with our clients, we develop effective and efficient processes

and procedures to achieve program objectives while conforming to the evolving regulations and standards required in this fast-growing sector of the utility industry.

Services

- Review current processes
- Review current system capabilities
- Identify gaps in procedures and system capabilities
- Create process diagrams and Standard Operating Procedures
- Propose Joint-Use application, review, approval and One-Touch notification processes
- Select most effective notification system
- Conduct in-house client training
- Manage One-Touch programs
- Help develop effective communication strategies
