

EN Engineering, an experienced provider of engineering, consulting, data analytics, and automation services for the utility, power, infrastructure and renewables markets is renaming the company to ENTRUST Solutions Group, LLC to better represent the broad end-to-end portfolio of solutions we offer beyond engineering, and to better reflect the comprehensive services we have developed to meet the dynamic challenges faced by our customers. As we have grown over the past 20 years, EN has evolved and grown into a much larger and diverse company, and we believe that this renaming will better represent our total company in the market and make it easier for our clients to understand the full scope of solutions we offer.

As part of the renaming/rebranding effort, we have created several "sectors" within ENTRUST Solutions Group that represent focus areas with similar service offerings. The EN Engineering brand will continue to exist as a sector within ENTRUST Solutions Group, along with EN Automation, EN Consulting, EN Data Solutions, and EN Field Services. Our well-known acquisition brands – G2 Integrated Solutions, Kestrel Power Engineering, Texas Utility Engineering, Spectrum Engineering Corporation, ESC Engineering, TG Advisers, etc.— will take on the ENTRUST Solutions Group name, and the acquired brands will continue to exist under this umbrella and will be highlighted on our website.

## **EN**ENGINEERING

EN Engineering delivers high-quality and reliable engineering solutions to our clients across many markets. This name is recognized in the industry and will continue to be used when referring to the engineering services ENTRUST Solutions Group offers its clients.

EN Automation is a leading systems integrator for a wide range of energy, industrial, and manufacturing industries seeking real-time data and information to improve operational performance.

EN Consulting offers subject matter expertise to electric and gas utility and infrastructure clients across many technically complex areas such as power systems, transmission and distribution, power generation (both conventional and renewable), and system integrity.

EN Field Services offers comprehensive construction management, inspection, survey, and commissioning services with an emphasis on ensuring safe and compliant installations for utilities and operators across the country.

EN Data Solutions specializes in delivering analysis and insights, technology system consulting, data management, and data integration and solution deployments to our clients across many markets. Our software and technical solutions help our clients digitally locate, identify, analyze, and interactively connect the data relating to their assets and customers.
