

MATERIAL TEST REPORT (MTR) PROGRAM

OUR SOLUTIONS

A Material Test Report (MTR) certifies a material's chemical and mechanical properties. This document provides the certification associated with the metallurgical and manufacturing requirements of pipeline components. MTRs are critical for the energy industry by providing a Traceable, Verifiable, and Complete (TVC) record of the material. TVC is a process required by PHMSA code for gas and liquid transmission pipelines to validate records of all components in a pipeline. EN's Corrosion & Materials group has a team led by our Chief Metallurgist to perform these critical reviews accurately, quickly, and cost effectively. Our process relieves the administrative burden on our clients and ensure compliance with PHMSA, industry, and client specific requirements.

BENEFITS

- TVC review for complete records
- Expedited turn-around as required
- Redline markings on documents
- Cost effective
- Oversight by licensed professional engineers
